

# **Managing** and **monitoring** all server, network and application activity, to **ensure ultimate performance** at all times

“Abilisoft is leading a tea party movement, attacking the service assurance problem from the bottom up. Keep your current management system, but totally overhaul your data collection layer. That’s a radical concept in a market where vendor silos are the order of the day.”

Dan Baker, Research Director, TRI

# The global **leader** in agent technology **innovation**

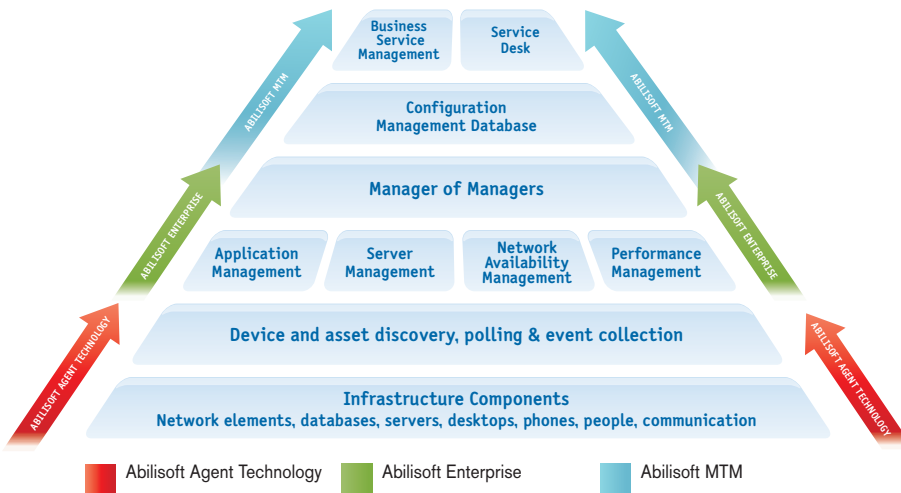

- **Abilisoft reduces total cost of ownership** – By centralising the management of IT monitoring and providing a single dashboard view of all server, application and network activity, Abilisoft reduces the overhead for dedicated IT resources
- **Abilisoft improves operational efficiency** – With enhanced levels of automation coupled with proactive agent technology, Abilisoft saves time and improves business processes
- **Abilisoft enables your business to scale** – Abilisoft's unparalleled scalability gives organisations the foundations from which grow and compete in today's crowded marketplace

In the past decade, most organisations have invested in a service assurance solution to ensure the uptime of their IT infrastructure. However for this to be truly effective, the agents that feed events into the management platform must be up to the job.

At the heart of Abilisoft's products and solutions is **cutting-edge agent technology** that installs seamlessly into the existing environment. Abilisoft is unique in its ability to replace an organisation's existing agent layer, with **zero impact** on the performance and continuity of the management layer. In addition, Abilisoft agents are lightweight, proactive and highly intelligent, empowering organisations to automate many business processes.

# Abilisoft's monIToring family

**Abilisoft Agents.** Abilisoft's intelligent and highly automated agent technology installs seamlessly into the existing environment to optimize data collection

**Abilisoft Enterprise** is the cornerstone of the Abilisoft product range; an end-to-end management solution that overarches heterogeneous IT environments, providing a single dashboard view and central point of control to proactively monitor end user experience, and ensure the performance of real or virtual servers, web, applications, databases and networks.

The Abilisoft software overarches the existing IT infrastructure, providing a **single dashboard view** of all activity taking place in physical, virtual and cloud-based environments, for mid and large scale enterprises.

Abilisoft eradicates the complexity of **monitoring multiple heterogeneous operating systems**, applications, databases and networks, with solutions that are easy to use, simple to maintain, and installed enterprise-wide within hours.

Abilisoft's powerful and **competitively priced solutions** include superior automation technology to reduce total cost of ownership, and a central point of control to radically reduce the impact of hardware and software application failure, and in turn, improve service levels.

# Monitoring and alerting made simple

Abilisoft understands that business challenges vary from industry to industry, and prides itself on the many years of experience working with a variety of organisations, on a multinational level. Abilisoft provides bespoke solutions to centralise the monitoring and management of your IT environment and ensure optimum performance, however complex your infrastructure.

## About us

Abilisoft was founded in 2005 to address the need for an IT performance and monitoring solution that was easy to use, simple to maintain and deployed out of the box. In 2007, Abilisoft released the first generation of its performance management software, and continues to grow organically, by successfully working closely with service provider and enterprise customers across the globe, providing them with 21st century products that fit their business models and requirements.
